EKOMJAH DENIS

FULL-STACK DEVELOPER

ekomjahedet@gmail.com github.com/ekomjah linkedin.com/in/ekomjah x.com/ekz_dee Portfolio

SUMMARY

Full-stack developer with 2+ years of experience, 5+ portfolio-grade projects, and 50+ merged PRs across personal and open-source repositories, including freeCodeCamp (440k+ GitHub stars). Skilled in frontend and backend development, performance optimisation, authentication, state architecture, and deploying full-stack applications. Use agentic coding tools like Claude Code daily to plan and implement changes and build MCP servers that give AI agents custom tools, such as scraping web pages and storing the extracted data in a database. Hungry to learn, ambitious, driven, curious, and highly coachable. Comfortable picking up unfamiliar codebases, solving complex problems, and collaborating asynchronously through pull requests, written specs, and documentation; seeking a remote full-stack/software-related role. I also write about technical concepts that I learn or find useful for the developer ecosystem on the Dev.to blogging platform.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Python, Go

Frontend: React, Next.js, HTML5, CSS3

Backend: Node.js, Express, Hono, FastAPI, REST APIs

Databases: PostgreSQL, Prisma, MongoDB, SQLite, MySQL, DynamoDB

Tools, Cloud & Infrastructure: AWS (S3, Lambda), Cloudflare Workers, Docker, Terraform, GitHub Actions, Git, Figma

AI-Native Development: Claude Code, MCP server development, agent-assisted planning and implementation

SELECTED PROJECTS

Captura — Screenshot Capture & Search SaaS

React, TypeScript, Python(FastAPI), AWS (S3, Boto3), Tesseract(OCR), Terraform, Clerk, PostgreSQL, SQLAlchemy

- Built an end-to-end workflow that turns raw screenshot uploads into full-text-searchable, downloadable cloud assets by running Tesseract OCR on every image, serving 20 users / ~400 screenshots.
- Cut image payload size by 40% by generating optimised WebP/JPEG variants on upload, stored and delivered from AWS S3.
- Removed OCR blocking for large files by introducing background OCR processing, so files uploads return in less than 30 seconds instead of 60

Dortrl – A URL shortening service and link management platform

Built with the BHVR Stack (Bun, Vite, React(TypeScript), Hono.js), SQLite, DrizzleORM, Cloudflare Workers

- Designed a tiered API model where anonymous users can create up to 2 links with 24-hour expiry, and authenticated users get custom expiry and click analytics, limiting abuse and storage growth while rewarding sign-ups.
- Automated daily cleanup of expired links using Cloudflare Workers Cron Triggers, maintaining a lean Cloudflare D1 database with zero manual maintenance.

Penny Wise (Team Lead) — Financial Literacy Learning Platform

React, JavaScript, Express, MongoDB, Mongoose, JWTs

- Led a team of 6 developers building short lessons and interactive labs that teach children and preteens useful money concepts like saving, budgeting and thoughtful spending through short, accessible lessons and courses
- Designed the learner progress model — a separate Progress collection with a unique (learner, item) index and module completion computed on read — preventing duplicate progress records.
- Built the React learner experience, from UI design logic to JWT authentication and proper client-side fail-safe progress sync.

OPEN-SOURCE CONTRIBUTIONS: freeCodeCamp — Contributed to freeCodeCamp's open-source codebase and curriculum, one of the most-starred repositories on GitHub (440,000+ stars).

EDUCATION:

University of Uyo — Mechanical Engineering 2025 – Present
